

# File Server as a Service (FSaaS)

## The Problem ...

Unless you have a very good reason for on-premises server(s) there isn't really any justification for having them in this day and age. Whether it's the capital purchase price, time/effort managing them, the space they take up and/or all the electricity they use - a physical server at your office isn't necessary. Moreover, if your server is approaching end of life, do you really want to fork out the cash replacing it?

## The Solution ...

We've devised FSaaS - instead of an on-premises server, your server is in the cloud (i.e. the server resides in a data centre with a secure/encrypted link over the internet). From the staff perspective, everything works in the same way, so logging on, accessing shared information, permissions, etc - they are all the same.

We only use UK based cloud servers housed in professionally run datacentres and they are significantly more reliable than a customer having their own physical servers. Also, depending on the specification required, cloud servers tend to run much quicker. With FSaaS, indirect costs are significantly reduced; managing users, maintaining software, adherence to policies, compliance, simplification of backup, less downtime and greater reliability plus many more benefits too numerous to mention here!

Another big plus is the ability to work from anywhere. Our FSaaS service comes with a range of login/security options that enables you to access your server and work from anywhere (subject to suitable security). Scalability is another huge advantage - you can grow from one server to multiple servers literally within hours. Whereas that kind of growth using conventional servers will take significantly longer. Or if your work is seasonal, you can expand to multiple servers when busy & drop back to a single server when quiet.

## Benefits Summary ...

- ✓ Your overheads reduced.
- ✓ Total cost of ownership is less.
- ✓ Accreditation/Compliance easier.
- ✓ Improved security.
- ✓ Reliability, redundancy, better backup, scalability.

## The Costs ...

In order to quote accurately, we need to know a lot about your IT; users, applications, how much disk space you need, etc. Typically FSaaS costs for an SME employing 25+ are £2,000 to £3,000 set-up fees and monthly costs of between £175 and £200.

## Call To Action ...

Don't wait for your competitors to implement FSaaS and get their overheads down before you do it. Take a good look at the benefits of FSaaS with us - we'd be delighted to do a demo. Once you've compared your conventional way of working with our FSaaS solution - we'd like to think you'll be impressed, maybe even amazed!

For more information about FSaaS or any of our products & services, give us a call on
